Summary

Final-year **Computer Engineering** student having practical experience in **Full-stack web development** and **APIs**. Strong foundations in **algorithms**, **data structures**, and **problem-solving** demonstrated through **competitive coding** and **project work**. Motivated to collaborate and improve day by day.

Education

Army Institute of Technology, BE in Computer Science 2023 – Ongoing

- Cumulative GPA: **9.43/10.0** (till date)

Army Public School, Hisar – Intermediate (PCM) 2022

- Percentage: 90.6%

Skills

Programming Languages: Python, C++ , HTML, CSS, JavaScript/TypeScript, and Java.

Libraries & Frameworks: Node.js, React.js, Express.js, Bootstrap, EJS, Joi, Tesseract.js, Passport.js.

Databases: MongoDB, DynamoDB(AWS), MySQL.

Security: JWT and Encryption

Cloud & Infrastructure: Docker, Kubernetes and Azure

Tools & Version Control: Git, GitHub, Linux(Basics), Docker, VS Code, Postman, and Figma (for UI collaboration).

Experience

Fullstack Intern - Completum Health, Amritsar (Remote) July 2025 – Dec 2025

- Automated glucose data extraction from PDF graphs using a **custom-built OCR and computer vision** pipeline, **reducing manual data entry time by over 90%**.
- Enabled longitudinal patient tracking by implementing a **multi-pass OCR timestamp system with cross-year inference** ensuring correct sequencing across month/year boundaries.
- Containerized** backend services using **Docker** and deployed them on **Azure** using **kubernetes**, enabling scaling.
- Optimized ingestion performance using **in-memory buffering** and batched database operations, processing **1k–5k readings per upload in 1–4 seconds** on standard hardware.
- Tech:** Node.js, Express.js, MongoDB, Python, OpenCV, Kubernetes, Azure, Docker

Projects

Bloodrest – AI Blood Test Analyzer [Github](#)

- Optimized cost and response speed by **reducing OpenAI API token usage by 90%** through sending only extracted key biomarker data instead of full PDF content.
- Achieved over **95% accuracy** on **100+ scanned reports** using **Tesseract** and **Python** preprocessing, and generated AI-driven reports within 30 seconds using **Puppeteer** and **EJS** templates.
- Implemented **JWT-based authentication** to secure user login and ensure data privacy..
- Tech:** Node.js, Express.js, MongoDB, Python, Tesseract, OpenAI API, Puppeteer

YelpCamp – Camp Listing Platform

[Github](#)

- Developed **15+ RESTful routes** with modularized **CRUD** operations, following **MVC principles** to build a scalable backend for users, campgrounds, and reviews.
- Refined the user interface and resolved **10+ edge-case bugs** through **usability testing** and feedback from over **50 users**.
- Reduced average page **load time by 40%**, enhancing performance and user experience through **Dockerized** static asset optimization and streamlined middleware.
- **Tech:** Node.js, Express.js, MongoDB, Passport.js, Joi, EJS, Bootstrap

Publications

Cloud Computing and Navigating its Secureness

Dec 2024

Utkarsh Sachan, **Beer Singh**, Bipasa Maji, Mridula Chandola, Ketankumar Ganure, Vitthal Hivrale
10.1201/9781003598152-63

Achievements

- Solved **700+ algorithmic** problems across LeetCode, GeeksforGeeks and HackerRank.
- **Adobe India Hackathon Semi-Finalist** secured under **102 rank** out of 90000+ teams.
- Current LeetCode rating: **1793**; Rank: **1305** in Biweekly Contest 158 (June 2025)
- **3rd place** – Vulcan Research Paper Writing Competition (2024)
- Qualified **NDA exam 4 times** (2022–2023)
